

HIMASRI ALLU

Dubai, UAE · UAE Golden Visa holder · +971 56 212 9141 · alluhimasri@gmail.com
linkedin.com/in/allu-himasri · github.com/himaallu · himasrialu.com

Software engineering student who ships full-stack products end to end: Next.js front ends, FastAPI services, PostgreSQL, Docker, CI/CD and serverless AWS and Google Cloud deployments. Builds AI features that are tested and measured. Top 4 of 400+ at the n8n Dubai Hackathon · 4x published researcher with an IEEE Best Paper Award · 2x AWS certified.

EDUCATION

University of Wollongong in Dubai · Master of Applied Artificial Intelligence

Sep 2026 – Present

Vellore Institute of Technology, India · B.Tech Computer Science and Engineering · CGPA 8.31/10

Aug 2021 – Sep 2025

EXPERIENCE

AI Fellow · Ground Truth, New York (remote)

Jan 2026 – Jul 2026

- Built an internal reporting automation tool for **30–40 account managers**, turning a client KPI reporting task that took about **2 days** by hand into a fully automated run.
- Scaled it to **200–300 client-ready reports a week**: a serverless Python pipeline on **AWS Lambda**, orchestrated by **Step Functions**, pulls from internal APIs and databases with scheduling, retries and per-client configuration.
- Owned it independently from ambiguous requirements to production in **six months**, settling cost-versus-scalability architecture trade-offs up front; built with Cursor.

Founder's Office Generalist (AI & Automation) · UrbanDart, Hyderabad

Oct 2025 – Jan 2026

- Cut client onboarding from **2 days to 15 minutes** with an **LLM onboarding interviewer** that captures each client's requirements as structured records in an **Excel CRM**.
- Built a **Python AI agent**: each **WhatsApp Business API** webhook or **LinkedIn** message triggers an **LLM** that classifies it and, via **tool calling**, updates the CRM.
- Automated intake, support and follow-ups for **up to 50 clients**, with the agent alerting the right team member on WhatsApp for every request.

IT Intern (AI & NLP) · Petrofac Limited, Sharjah

Jan 2025 – Apr 2025

- Cut tender analysis time by **40%** for a **5–10 person IT team** that read every tender document by hand before quoting to clients.
- Built a **Python NLP pipeline**: **PyPDF2** extracts the tender text, which is split into clauses, and **BERT** embeddings score each clause against an IT vocabulary.
- Highlighted IT keywords in the flagged clauses with **KeyBERT** and served the results through a **FastAPI** service, containerised with **Docker** on the company's own servers.

Quantum Computing Project Intern · C-DAC (MeitY), Hyderabad

Sep 2023 – Dec 2023

- Surveyed **7 quantum benchmarking methods** and simulators, including C-DAC's indigenous **QSim** simulator, and presented findings on **application-oriented benchmarking** for quantum computing.
- Wrote and tested **12 quantum programs** in **Qiskit** as part of a **6-member team**, with in-depth analysis of the **Quantum Fourier Transform** and **Shor's algorithm**, the quantum algorithm that threatens RSA encryption.

PROJECTS · code and live demos at github.com/himaallu and himasrialu.com

Coverage Amplifier · turns press coverage into 5 ready-to-post marketing assets, every claim backed by the article

Next.js, FastAPI on Google Cloud Run, Supabase Postgres, Alembic, Gemini

- Built a three-stage **extract → generate → verify** pipeline that writes only from the article's sentences, so every claim is traceable.
- Caught **3/3** seeded hallucination types with a **CI eval harness**; ran async **FastAPI** jobs on **Cloud Run** at **~22 s** and **\$0.003** per kit.

Haqqi · AI legal-aid assistant for UAE migrant workers with limited Arabic or legal knowledge

Next.js, FastAPI, Supabase pgvector, Gemini / K2 Horizon, Whisper, Langfuse

- Built a voice-first assistant in **8 languages** turning a worker's story into cited violations, an itemised claim and an **Arabic complaint PDF**.
- Designed **4 LLM agents** over **hybrid retrieval** on UAE labour law, with a **deterministic claim calculator** and code-checked citations.
- Achieved **92%** retrieval hit@5, **97%** citation support and **100%** calculator accuracy on a **50-case evaluation**.

CardShield · real-time fraud detection service that scores every card transaction

LightGBM, MLflow, FastAPI, Evidently, Docker, GitHub Actions

- Cut total fraud cost by **65%** vs the best amount rule (recall **0.80**) by setting the decision threshold by business cost.
- Served **LightGBM** via **FastAPI** at **13 ms** p95 with per-decision **SHAP** reasons, after comparing **4 models** on a time-based split.
- Tracked models in **MLflow** and added **drift monitoring** that caught all **3** injected shifts with no false alarms; **Docker**, **50 tests** and **CI**.

RESEARCH, ACHIEVEMENTS AND LEADERSHIP

- 4x published researcher**: IEEE conference paper (**Best Paper Award**, IConSCEPT-2024), 1 international and 2 national journal papers
- Top 4 of 400+**, n8n Dubai Hackathon “Automate with K2 Horizon”, with Haqqi (Sep 2026)
- Winner**, Best Idea in Health and Wellness, 72-hour VIT hackathon, with ForeverYoung (Jun 2023)
- Founder**, VIT Blockchain Community: grew it to **1,000+ members**; workshops with Solana and Avalanche (2023–24)

SKILLS AND CERTIFICATIONS

Engineering: Python, TypeScript, SQL, Java, C/C++, FastAPI, Next.js, React, PostgreSQL, Docker, GitHub Actions, AWS, Google Cloud Run
GenAI: RAG, hybrid retrieval, pgvector, multi-agent pipelines, LLM evaluation, guardrails, BERT, LangChain, CrewAI, n8n, Gemini, OpenAI API, Whisper

ML / MLOps: scikit-learn, LightGBM, XGBoost, TensorFlow, MLflow, Evidently, model monitoring

Certifications: AWS Certified Solutions Architect – Associate (Feb 2024) · AWS Certified Cloud Practitioner (Jun 2024)
